TOTAL BODY PHOTOGRAPHY & AI ASSISTED MONITORING (TBP-AIM) INTAKE FORM

TREATMENT INFORMATION

Total Body Photography and Artificial Intelligence-assisted Monitoring (TBP-AIM) are specialized techniques to aid in the monitoring for changes to skin lesions/moles/nevi. This monitoring works for pigmented lesions, with the goal of early identification of potentially malignant lesions, like melanoma. TBP-AIM is not for general skin rashes or difficult to see non-pigmented lesions.

Skin screening like this may not equally benefit all people, but any person could benefit if it is of interest to them. Those most at risk of melanoma, and who would find the greatest benefit from formalized skin surveillance and monitoring, are:

- those with many (+50) atypical appearing moles
- those with a close relative with melanoma
- those with previous personal diagnosis/biopsy of melanoma
- fair or red-haired, light skin individuals
- those with a history of significant UV exposure or sunburn

As TBP-AIM utilizes photography and artificial intelligence (AI) to track skin lesions, any lesions located in areas that are not photographed may be missed (genitals, mouth/mucous membranes, scalp etc), and by enrolling in this program, you understand this risk. If you are enrolled when your photographs are reviewed with the physician, you will have the option to have these more difficult to assess areas examined. Even with an exam, these areas are potentially difficult to fully visualize and thus, lesions may be missed. If you or anyone else has identified a lesion of potential concern in a non-photographed area, please bring this to the attention of the provider during your consult.

If at any time lesions are identified as requiring medical management (including biopsy), you will be advised, and a separate appointment will be made for biopsy as appropriate. Such management or further investigation will be covered by Alberta Health Care (or other provincial health plans). If you choose to have lesions removed for cosmetic reasons, those reasons are not covered by Alberta Health Care, and removal of these lesions will have a procedural fee. Cosmetic treatment is optional, and you will be advised of any costs before any elective procedure is booked.

TBP-AIM may have partial coverage under certain private health benefit plans, but our clinic assumes no responsibility for determining or guaranteeing acceptance. We are happy to provide a general letter detailing the program and the potential health benefits that you can provide to your insurance company for investigation of possible coverage. Any forms required in addition to our office's general letter will incur a fee, respecting the Alberta Medical Association Uninsured Services Guidelines.

It is always important to be aware of your own skin and monitor it for changes then report to your health provider. TBP-AIM is an additional tool to assist you in your health surveillance.

FEES

How many lesions would you like to have monitored? (Please choose one)

- 3 or fewer lesions of most concern
 - Focused Program - \$75 intake assessment fee, and later
 - \$50/year for follow-up monitoring for any of the initial 3 or fewer lesions that remain
- 4 or more lesions over many areas of the body
 - Total Body Photography Total Program - \$250 initial assessment fee, and later
 - \$200/year for ongoing follow-up assessments

TBP-AIM only has a private pay fee to cover the hardware/software costs of capturing and storing images to map and monitor for concerning changes.

You are not charged for the services provided by the physician/s in reviewing your photographs or assessing and discussing management of your lesions, this part is covered by AB provincial health coverage. However, as our physicians are not Dermatologists and have other practice demands, yearly total skin surveillance checks will only be available through the TBP-AIM program.

An alternative to our TBP-AIM Program: you may ask your primary care provider if they are comfortable completing yearly skin screening or have your primary care provider refer you to a specialist Dermatologist for this service. If you have 3 or fewer lesions you would like assessed, without ongoing yearly monitoring, you are welcome to get a referral to our clinic for a regular Cutaneous Lesion Assessment. Referrals are sent through your family doctor or walk-in doctor to us by fax without any additional cost.

MEDICAL HISTORY

Have you had any previous skin cancers or biopsies?

- Yes
- No

(If yes, provide details)

Have you or any first- or second-degree relatives had melanoma?

- Yes
- No

(If yes, provide details)

Have you had any family members with other skin cancers?

- Yes
- No

(If yes, provide details)

Have you had any previous surgeries or treatments for skin conditions?

- Yes
- No

(If yes, provide details)

Do you have any allergies or sensitivities to medications or skin care products?

- Yes
- No

(If yes, provide details)

Name of your pharmacy: _____

And your current medications:

Please describe the location, size, shape, and colour of any specific lesion/s of concern to you:

LOCATION OF LESION	SIZE	SHAPE	COLOUR

What are your concerns or reasons for wanting to have your lesions assessed?

CONSENT

I have read the Important Information above regarding TBP-AIM and understand the risks, benefits and alternatives mentioned. I have been able to ask questions.

I understand that I am responsible for paying the fees associated with the program I have chosen. I consent to the collection and storage of my photographs for the purpose of monitoring and assessing my cutaneous lesions. I consent to sharing my photographs with other health providers as medically necessary for treatment or monitoring of my skin lesions.

I understand that my images will be reviewed by either Dr. Trevor Brooks, Dr. Lena Derie-Gillespie, or both, and that whenever possible, the management of any identified lesions will be provided by one of these two physicians.

We will try to accommodate photo sessions and physician consults on the same day whenever possible, but these two appointments may be on different dates depending on the physicians' schedules. We will contact you to confirm the dates and times of your appointments.

If you would like a copy of your photos sent to your email, you must consent in person (not by email or phone), and print very clearly the exact email you wish the photos to be sent to here:
